Education

Bachelor of Science in Computer Science and Engineering *Graduated: July 2026*
BRAC University, Bangladesh
CGPA: 3.85/4.0

HSC in Science *Graduated: January 2022*
Notre Dame College, Bangladesh
GPA: 5.00/5.00

Projects

Clubify - University Club Management SaaS
Technologies: Next.js, TypeScript, Tailwind CSS, Prisma, Supabase (PostgreSQL), Clerk, Paddle, Resend, Permit.io
- Engineered a **cloud-based SaaS platform** with **multi-tenant architecture** for university club and sponsor management.
- Implemented a robust global **AuthN/AuthZ** system using **Clerk** and a **hybrid RBAC-ABAC model** with **Permit.io**, managing **5+** distinct club member roles.
- Integrated **3** specialized services, including **Paddle** for secure sponsorship transactions and **Resend** for bulk email newsletters.
- Managed complex relational data and defined schema using **Prisma** and **Supabase (PostgreSQL)**.

CrowdEther - Decentralized Crowdfunding Platform
Technologies: Solidity, Next.js, Prisma, SQLite, TypeScript, Foundry
- Engineered smart contracts for secure crowdfunding
- Integrated real-time blockchain updates, ensuring transaction transparency
- Reduced deployment errors by 20 percent through comprehensive testing with Foundry

ChainProof - Blockchain-based Identity Ledger
Technologies: Solidity, Foundry, Next.js, ethers.js, Prisma, MongoDB, Tailwind CSS
- Built a decentralized identity management system
- Secured sensitive user data with advanced encryption and access control mechanisms
- Improved scalability by implementing gas-optimized smart contract logic

SendAi - Crypto-Sending Platform
Technologies: Solidity, Next.js, ethers.js, Foundry, TypeScript
- Developed a crypto-sending platform with a streamlined user interface, reducing transaction errors by 20 percent
- Facilitated over 50,000 in secure transactions during testing
- Enhanced wallet integration using ethers.js, improved user experience by 20 percent

Cryptix - Decentralized E-Ticketing System
Technologies: Solidity, Next.js, Prisma, SQLite, TypeScript, Foundry
- Designed and deployed a ticketing system that issued 1,000+ fraud-proof tickets
- Ensured transaction transparency through blockchain-based validation

Interactive Developer Portfolio
Technologies: Next.js, TypeScript, GSAP, Framer Motion, Aceternity UI, Redis
- Engineered a multi-layered, modern frontend architecture to effectively showcase Web3 and full-stack development projects.
- Implemented complex, high-performance UI animations and seamless state transitions utilizing GSAP, Framer Motion, and Aceternity UI components.
- Integrated Redis for optimized data caching and performance management, ensuring a highly responsive user experience.

Skills

- **Programming Languages:** Python, Solidity, JavaScript, TypeScript, C#, C++
- **Frameworks & Tools:** Next.js, ethers.js, Tailwind CSS, Foundry, HardHat, Truffle, Ganache
- **Blockchain Expertise:** Ethereum Virtual Machine (EVM), smart contracts, DApps, ICOs, decentralized identity
- **UI/UX Design Tools:** Figma, Canva, Framer Motion
- **Database & Backend:** Prisma, MongoDB, SQLite
- **Tools & Workflows:** Git, Agile methodologies, Cursor, GitHub Copilot, Claude Code, AI-assisted code verification, testing-driven development (Foundry/PyTest).

Experience

Freelance Blockchain Developer *2023 - Present*
- Delivered blockchain solutions for clients, improving transaction security by implementing industry best practices
- Conducted thorough code audits
- Designed UI/UX for Web3 platforms

Extracurricular Activities *2023 - Present*

- Senior Executive of BUEDF; organized events including Entrepreneurs Fest 3.0
- Chief Organizer of "Chase au Tresor," a university-level treasure hunt competition
- Active participant in blockchain hackathons and Web3 forums

Research Experience

Research Assistant | **BRAC University** *August 2026 - Present*

- Spearheading research on Self-Sovereign Identity (SSI) architectures, focusing on establishing verifiable AI Identity and cryptographic accountability for autonomous agents.
- Prototyping decentralized frameworks that bridge blockchain networks with Metaverse ecosystems to ensure secure, tamper-proof identity resolution across virtual environments.
- Evaluating advanced smart contract logic and Web3 protocols to securely integrate AI-driven systems with distributed ledgers.

Undergraduate Researcher | **BRAC University** *January 2025 - January 2026*

- Conducted core systems research on decentralized identity architectures, analyzing threat models and security protocols at the intersection of web3 systems and autonomous agents under the supervision of **Dr. Md Sadek Ferdous** (BRAC University, Bangladesh) and **Dr. Mohammad Zavid Parvez** (RMIT University, Australia).
- Co-authored a highly technical security paper currently under review at IEEE S&P, demonstrating strong capabilities in system decomposition, threat analysis, and technical specification writing.

Certifications

- **Blockchain Development Specialization Certificate** - Coursera
- **DApps Professional Certificate** - Coursera
- **Blockchain Platforms Professional Certificate** - Coursera
- **Smart Contracts Professional Certificate** - Coursera
- **Blockchain Basics Professional Certificate** - Coursera
- **Python Professional Certificate** - Coursera
- **Supervised Machine Learning: Regression and Classification** - Coursera
